Every investor's situation is unique and you should consider your investment goals, risk tolerance and time horizon before making any investment. Investing involves risk and you may incur a profit or loss regardless of strategy selected. Kaydan Wealth Management, Inc. is not a registered broker/dealer and is independent of Raymond James Financial Services, Inc. Securities offered through Raymond James Financial Services, Inc., member FINRA/SIPC. Investment Advisory Services offered through Raymond James Financial Services Advisors, Inc. and Kaydan Wealth Management, Inc.

# WHAT IS PORTFOLIO STRESS TESTING?

Stress Testing is about assessing the potential impact of economic scenarios (e.g. oil crash, inflation, etc.) on your portfolio and other investments.

In a portfolio stress test, we construct “what-if” scenarios based on real life macro-economic uncertainties, and measure their potential impact on your portfolio.

Portfolio stress testing is not about predicting the future, but about identifying and adjusting for downside risks.

## UNCOVER THE CONNECTIONS

We use economic research, historical records, statistical data, and quantitative analysis to measure millions of relationships between the economy and investments.

# KEY ELEMENTS OF THE PORTFOLIO STRESS TEST

## SCENARIOS

A scenario is a representation of a macro-economic or geopolitical event which has the potential to impact investment returns. We can design custom scenarios that reflect individual investor concerns, or apply our broad catalog of risk scenarios to a portfolio to identify risk factors.

## LEVER ANALYSIS

Our platform tracks over 90 different economic factors including GDP growth and CPI, market data like commodities and currency prices, and industry-specific factors such as shipping rates and housing starts. Then, based on statistical correlations, it analyzes the effect of these factors on assets in your portfolio.

## ASSETS (MUTUAL FUNDS, STOCKS, ETC.)

Our stress test scenarios can be used with a wide range of asset classes including stocks, bonds, ETFs, mutual funds, closed-end funds, options, separately managed accounts, hedge funds, and non-traded REITs.

# MEASURE RISKS AND OPPORTUNITES BASED ON REAL DATA

We can apply a quantitative approach to test economic and market scenarios that may help you make more prudent investment and financial decisions.

## LIVING IN RETIREMENT

Do I have enough money to live comfortably in retirement?

## PAYING FOR COLLEGE

What are the options to help children or grandchildren heading off to college in the next 18 to 24 months?

## PREPARING TO RETIRE

Looking to retire in the next 5 to 10 years?

## SAVING FOR COLLEGE

How should I get started and how much do I need to save?

## MAXIMIZING AN INHERITANCE

What are the options available to make the most out of an inheritance?

# UNCOVER THE HIDDEN RISK FACTORS IN YOUR PORTFOLIO

Assess your portfolio risks against a variety of economic and market scenario outcomes, covering a range of possible events such as:

**Negative Rates**

**Oil Crash**

**Tech Bubble 2.0**

**China Slowdown**

**Debt Cliff**

**Fed Stress Test**

**Baby Bust**

**Headline Risks**

**Healthcare Costs**

**S&P Valuation**

**Dysfunctional Europe**

**Rising Interest Rates**

We have identified nearly 90 different scenarios, or we can build a scenario based on your forecast.
